iVend Retail & SAP Business One
Fact Sheet

Why SAP Business One?

Many Small and Medium Businesses (SMBs) rely on basic entry-level accounting software/spreadsheets that fail to provide company-wide visibility needed to help the retailer grow.

With SAP Business One-based omnichannel retail management system, retailers can make informed decisions, based on real-time data, and act on it within one integrated system.

Retailers can place purchase orders, check stock, sell products and perform crucial retail operations all within one single system with SAP Business One. Far more than just accounting tools, SAP Business One gives retailers greater control over their business processes with a single, scalable system.

Omnichannel advantage of iVend Retail for SAP Business One

iVend Retail with SAP Business One is an end-to-end, omnichannel retail management solution that covers everything from POS to back office to head office operations. An iVend Retail setup can range from a single outlet to a multi-geography store environment, with complete integration of day-to-day operations.

SAP is a world-wide market and technology leader in client and server enterprise application software, providing solutions for companies of all sizes and industry sectors. iVend Retail with SAP Business One is an affordable, integrated solution designed to empower growing SMBs and large enterprises with omnichannel capabilities and powerful workflows. iVend Retail with SAP Business One enables a retailer to maximize sales potential by implementing fully-integrated sales growth programmes across all sales channels.
